

# **Estimating the Economic Impacts of Climate Change on California Agriculture**

**Richard Howitt, Josué Medellín-Azuara,  
Duncan MacEwan and Jay Lund**

**University of California, Davis**

**California Energy Commission**  
Public Interest Energy Research Program  
Sacramento, September 10 2009

# Overview

---

- Introduction
- Model Description
- Model Innovations
  - Incorporation of Agronomic Results
  - Climate Change Impacts through water and land
- Results
  - Extensive Margin
    - Land Use, Prices, Revenues, Water Use
  - Intensive Margin
    - Water Use per Acre in Region 19
- Extensions
- Conclusions

# Introduction

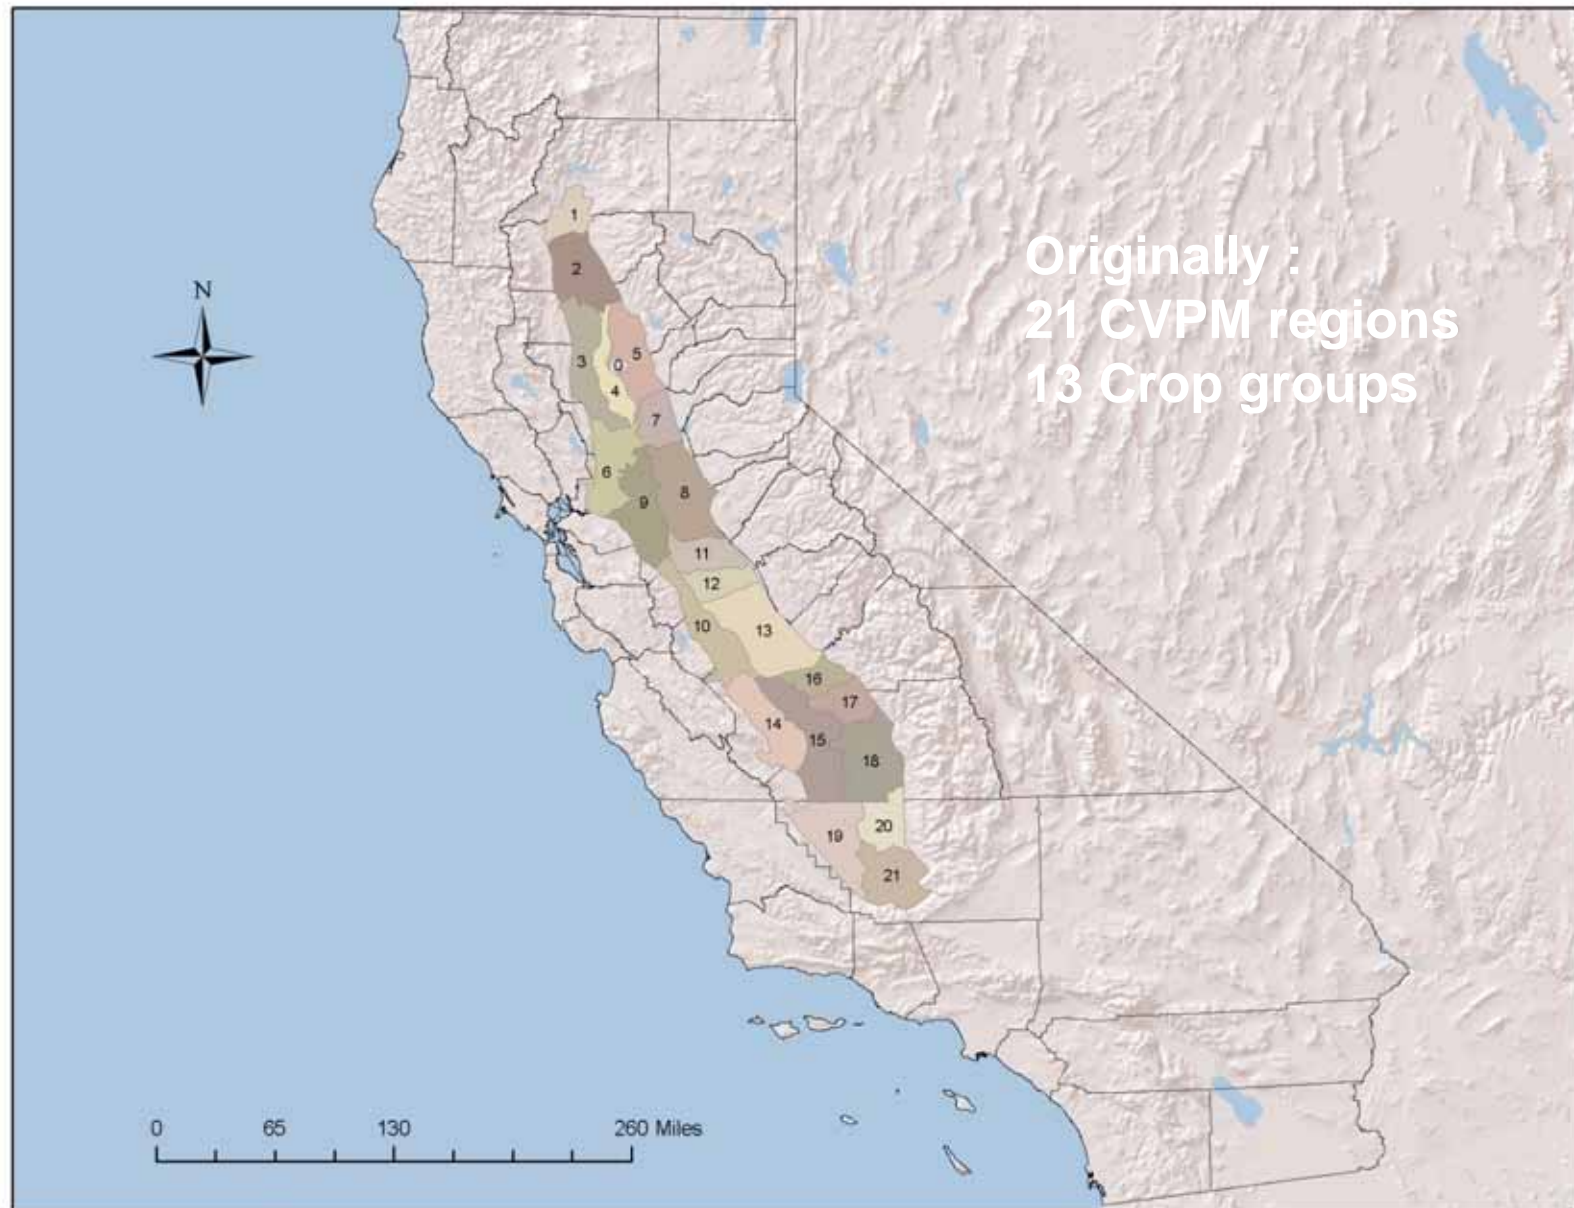

- ◉ Value of Agriculture in California
- ◉ Land cropping patterns are influenced by
  - Economic factors
  - Geographic conditions
  - Climatic conditions
- ◉ Future of California agriculture
  - Interaction among:
    - Technology
    - Resources
    - Market demands

# The Statewide Agricultural Production Model (SWAP)

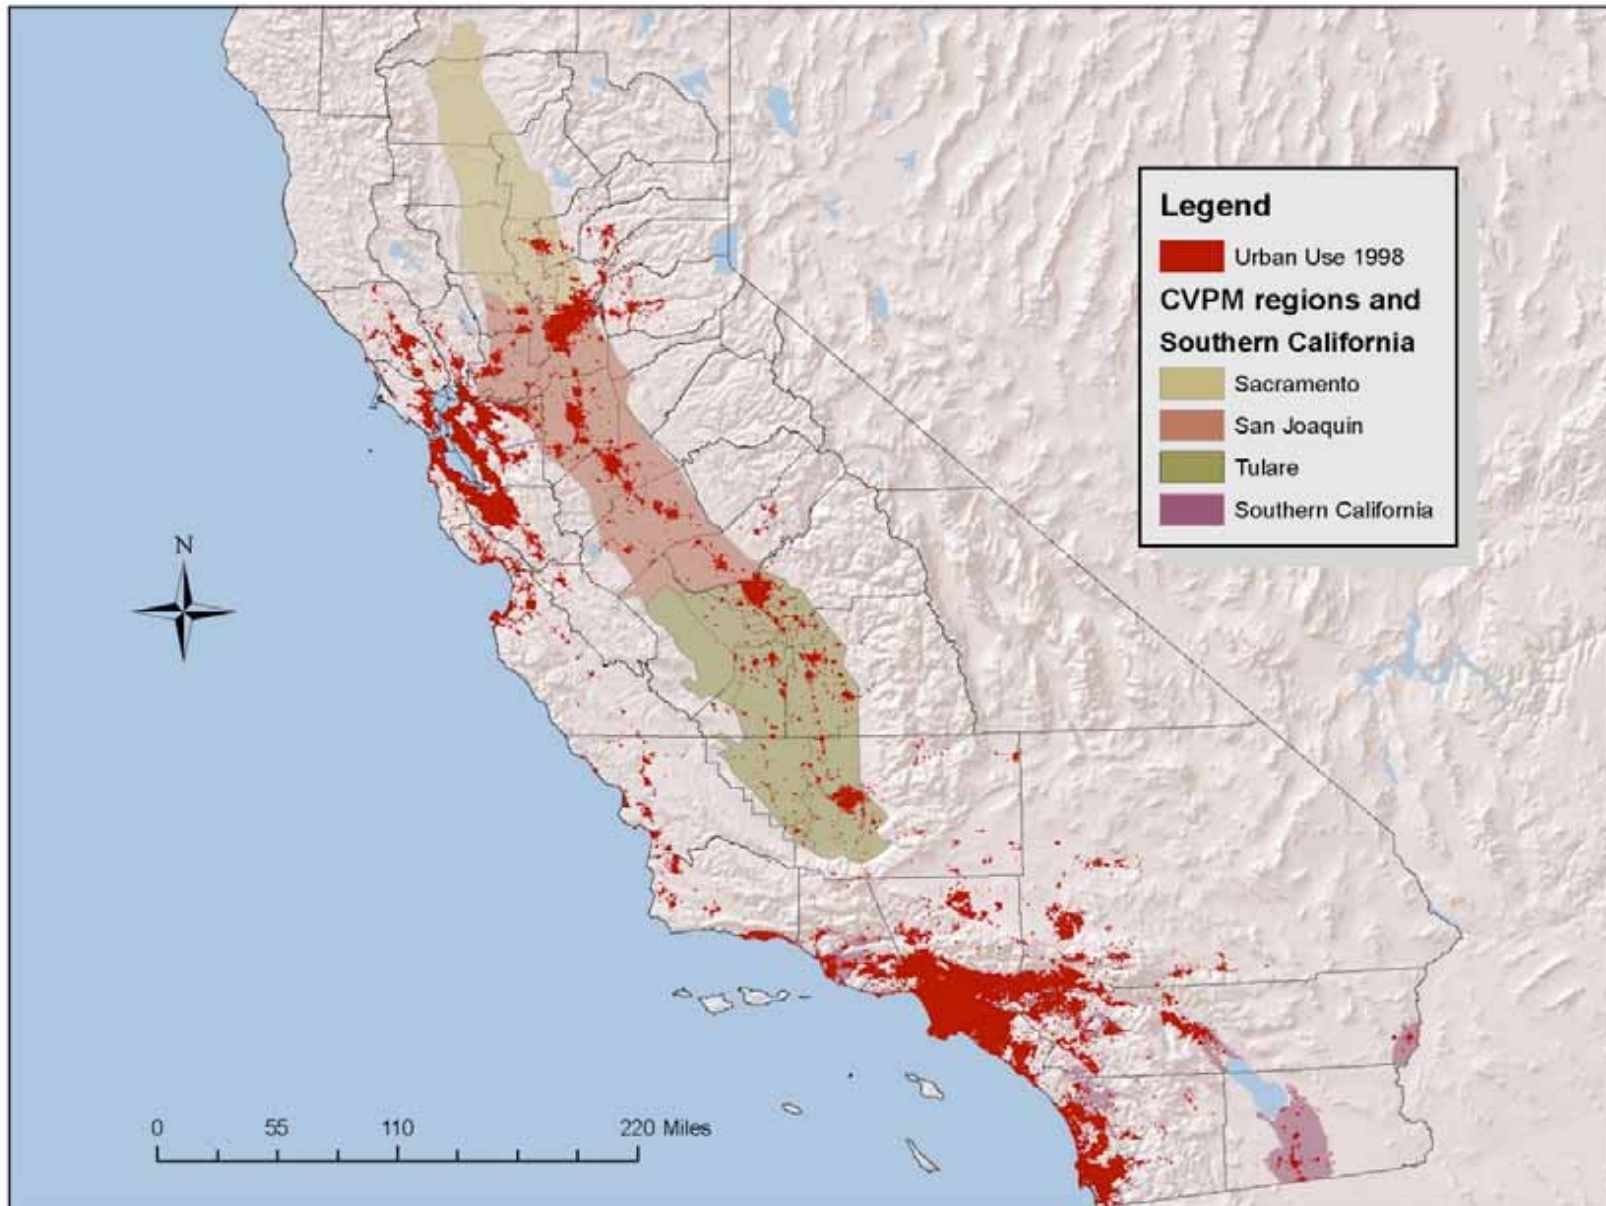

---

- Farmers are assumed:
  - Rational
  - Aimed to maximize profits
- Three step self-calibrating model
- Dairy herd feed is included
- Inputs: water, labor, land, supplies, 2000-05
- Thirteen Crop groups
- Two climate scenarios analyzed 2050
  - Historical
  - Warm-Dry

# SWAP Geographical Coverage

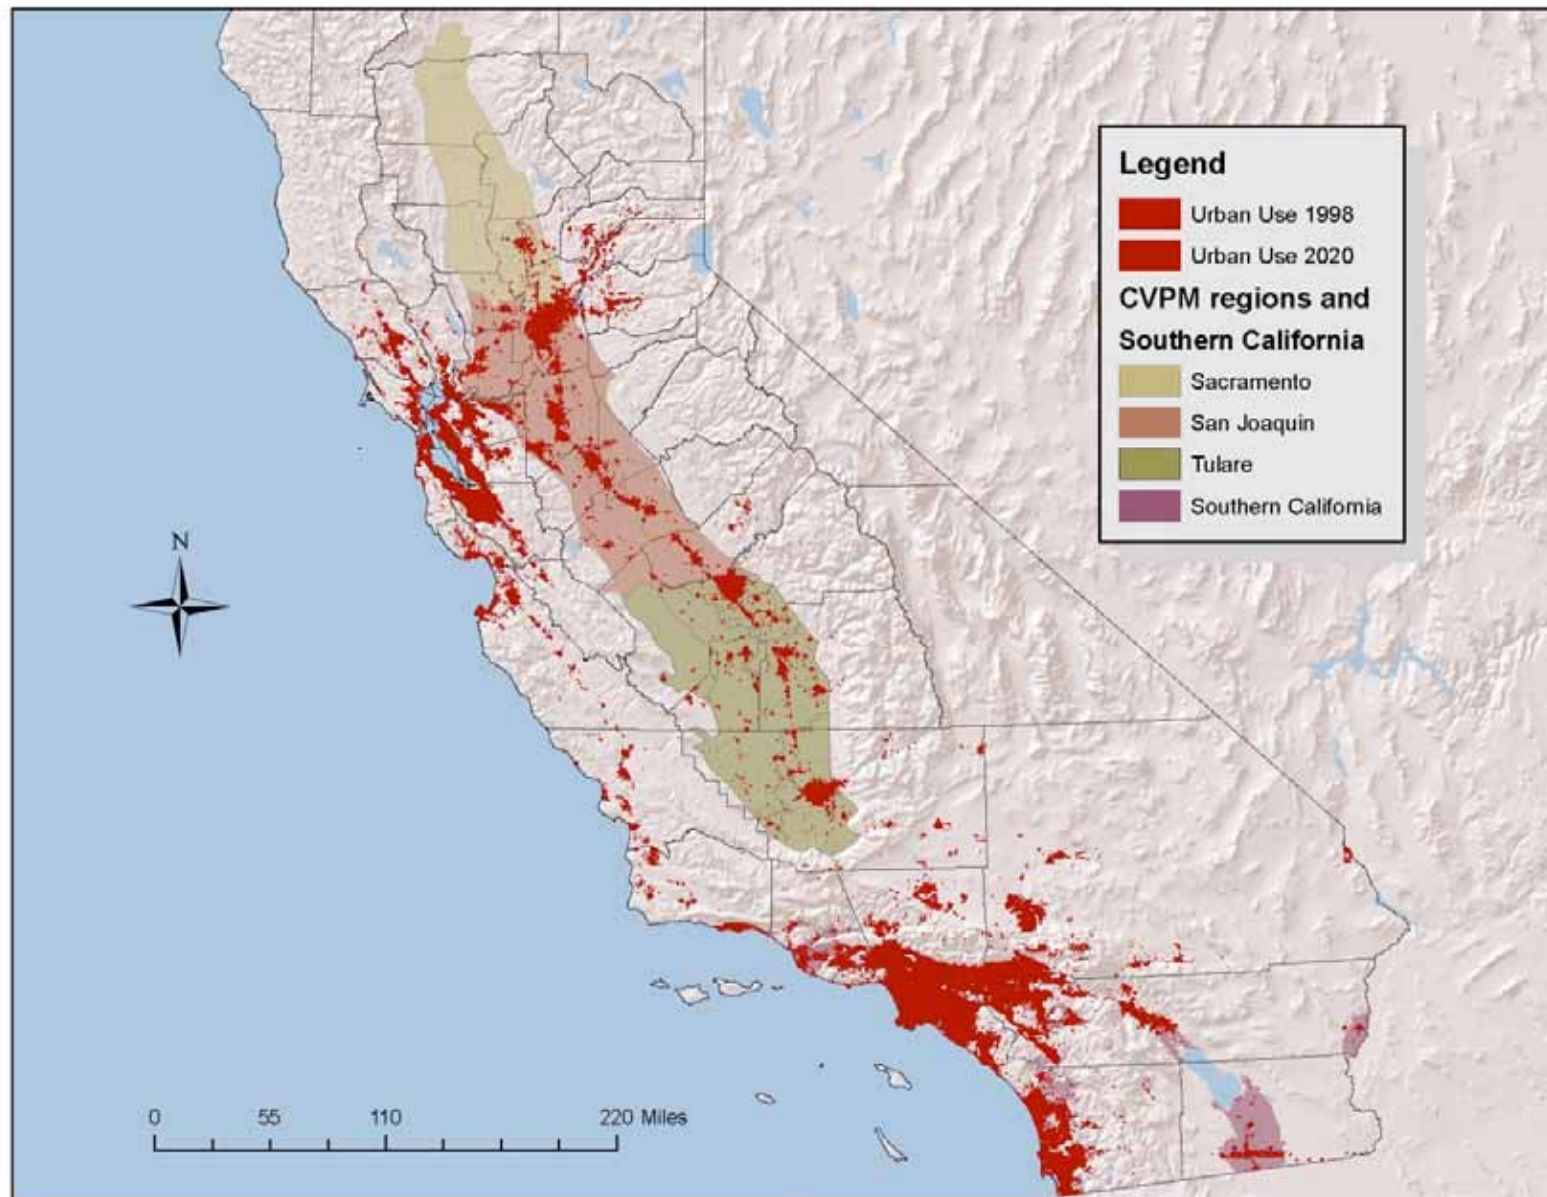

# Land use year 1998

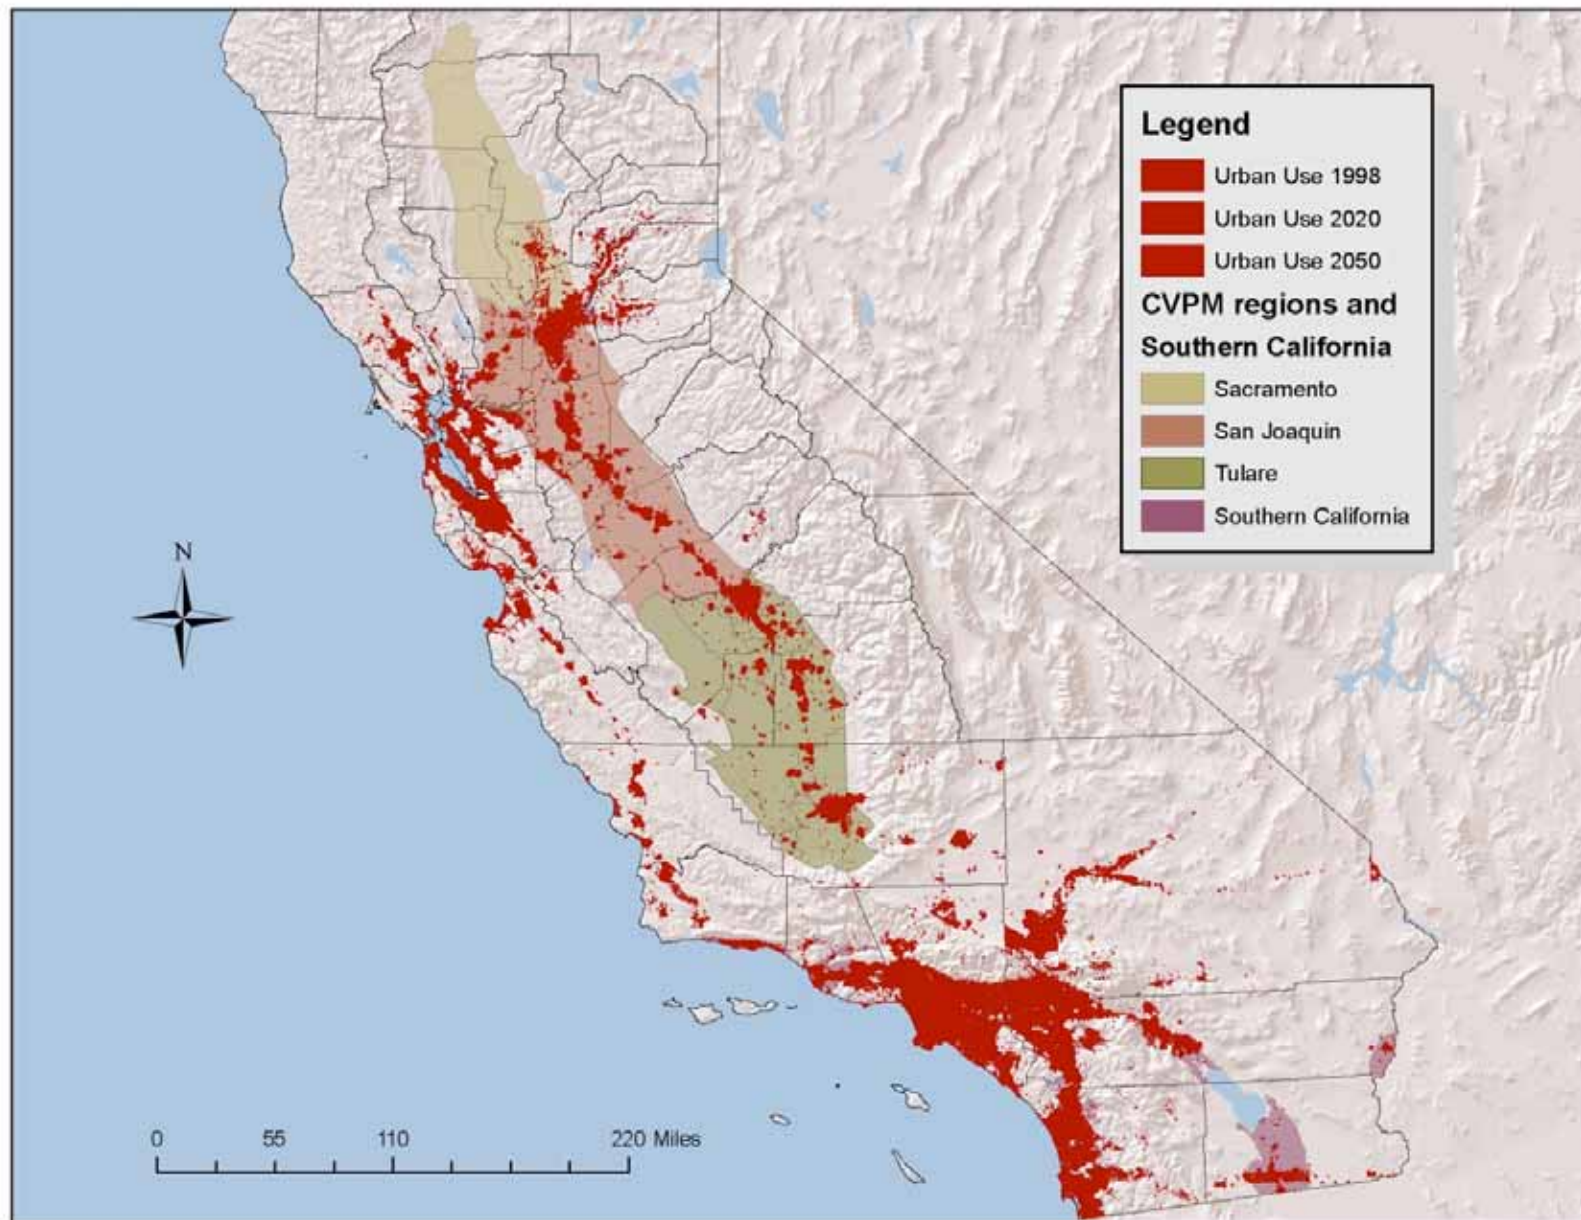

# Land use year 2020

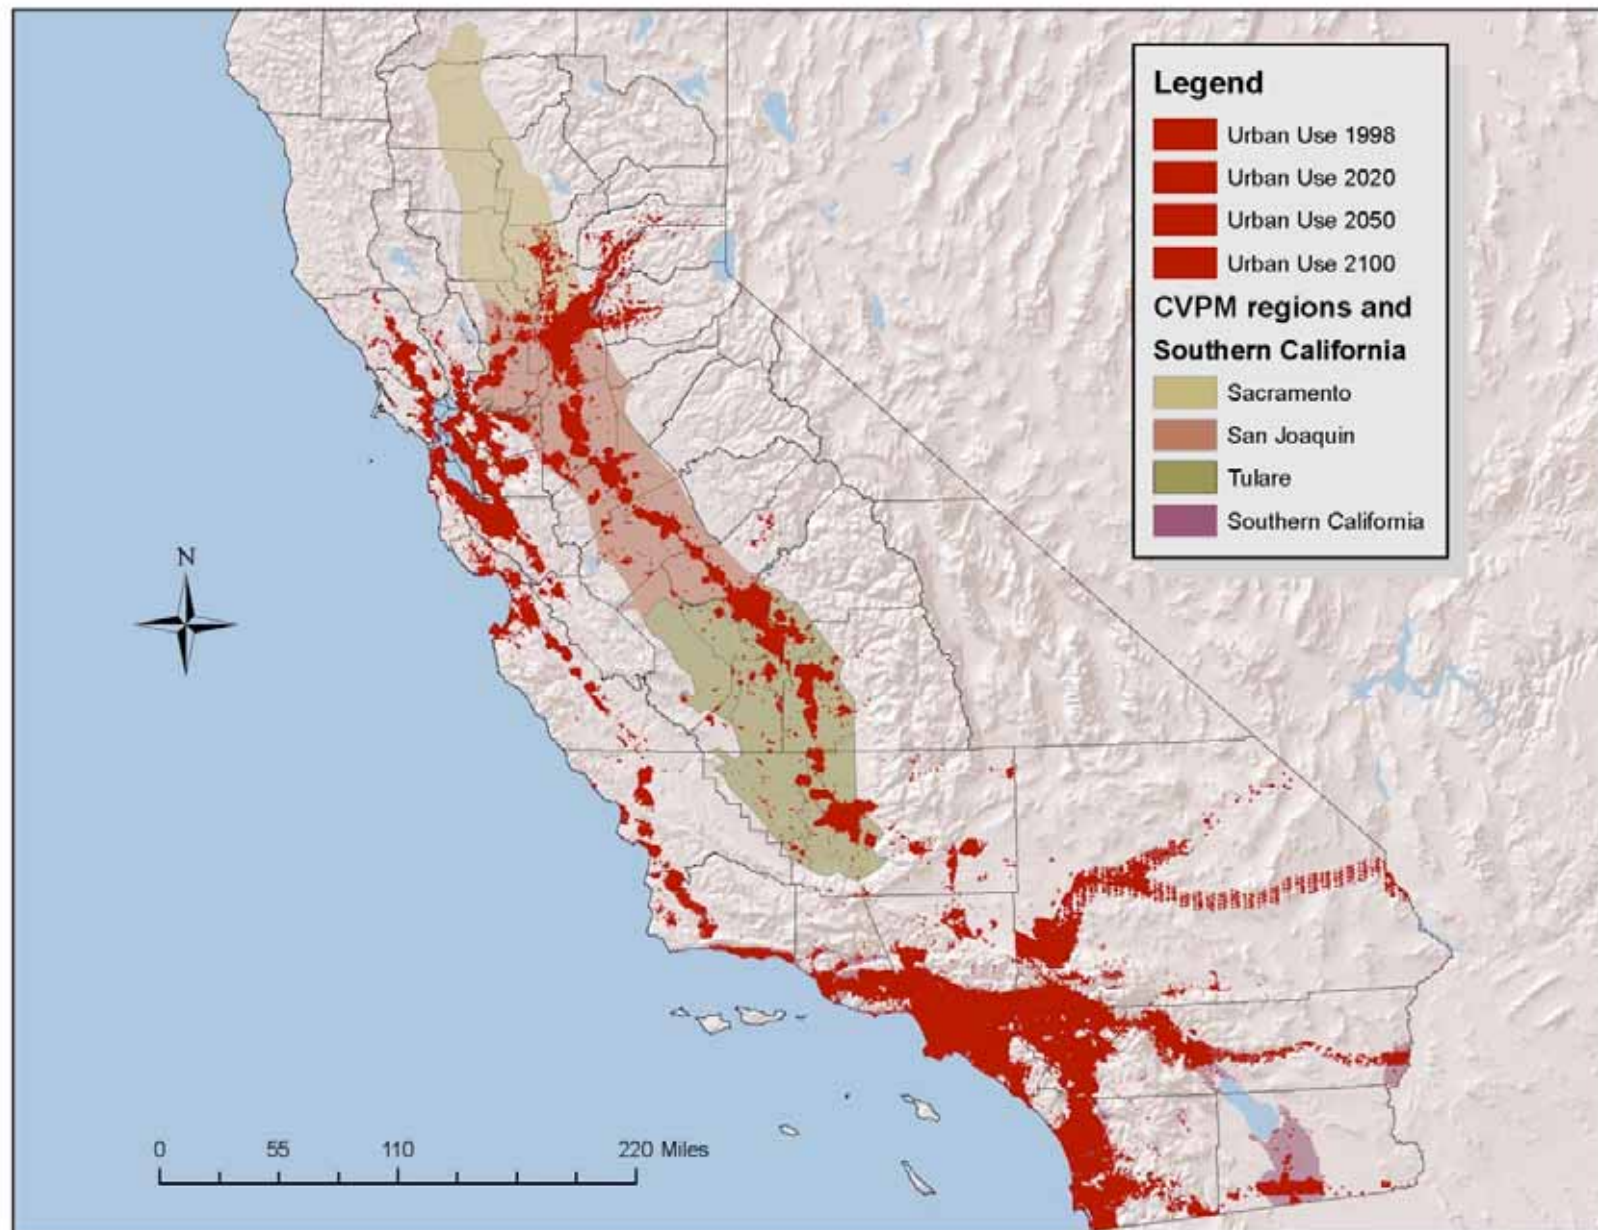

# Land use year 2050

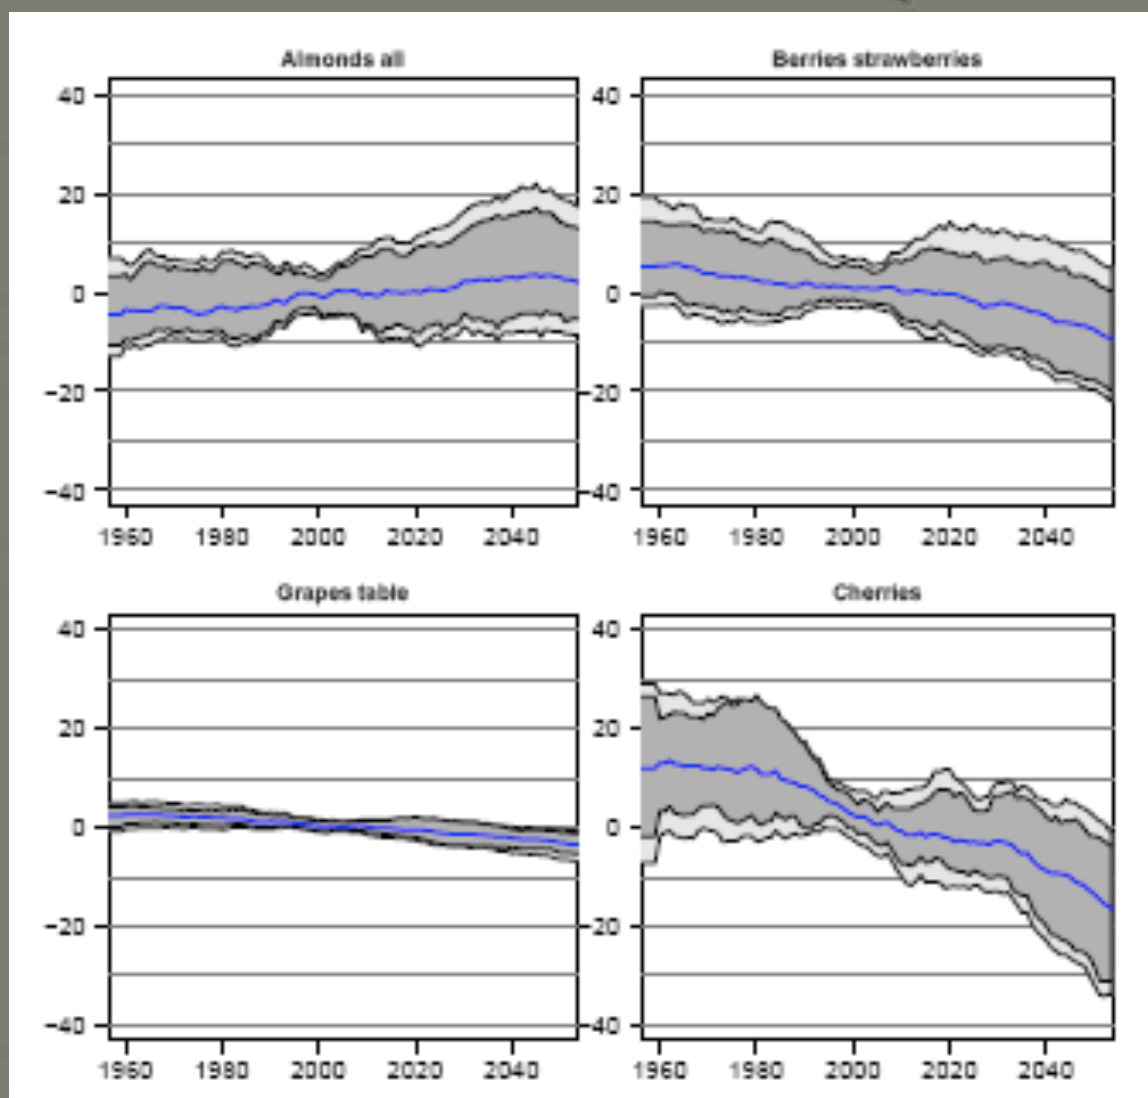

# Land use year 2100

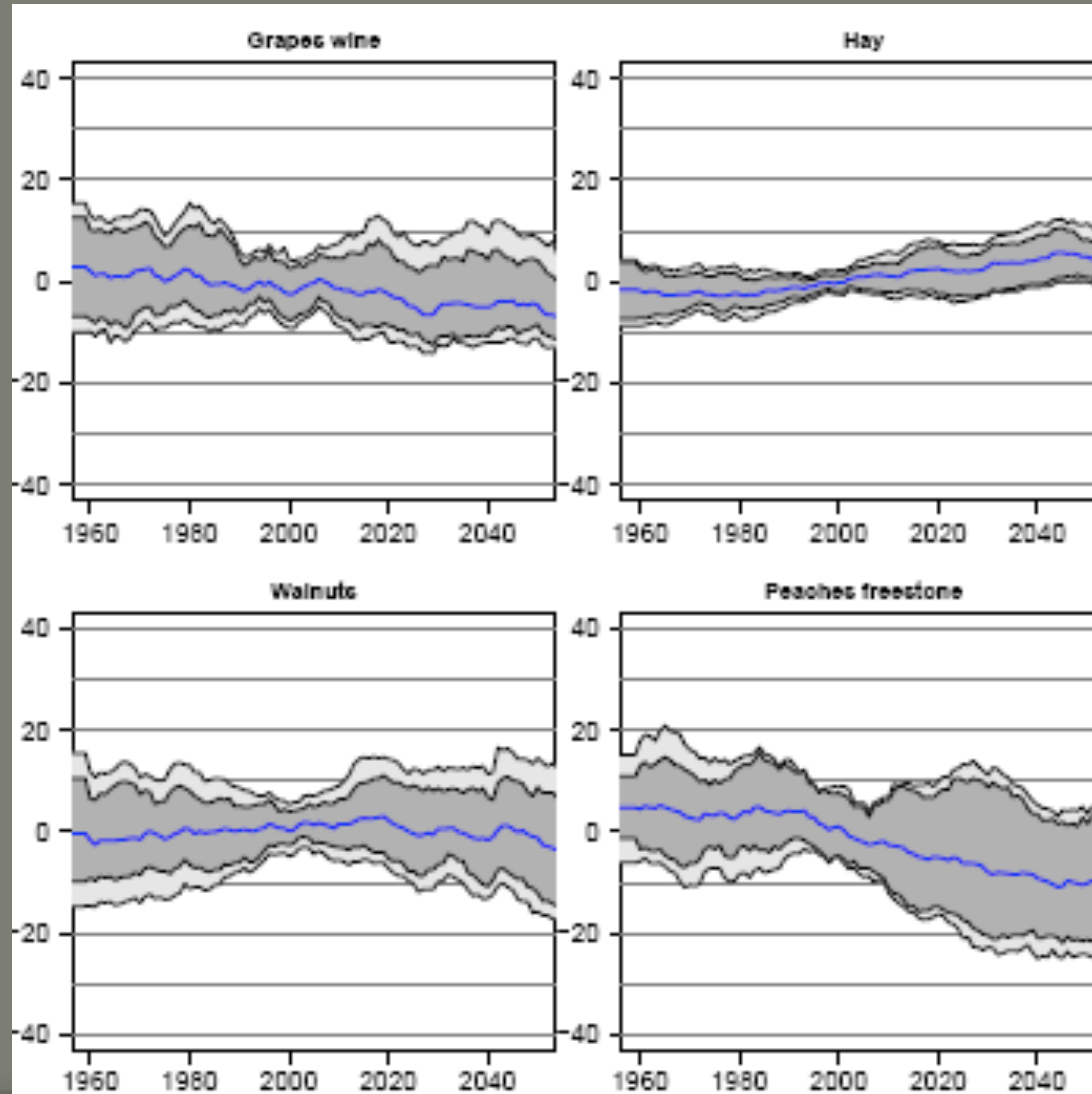

# Technological Change and Crop Demands by 2050

Crop	Yield % Change Technology	Demand % Change Intercept
<b>Alfalfa*</b>	<b>29.1</b>	<b>3.3</b>
<b>Citrus</b>	<b>28.5</b>	<b>3.6</b>
<b>Corn</b>	<b>25.4</b>	<b>5.7</b>
<b>Cotton</b>	<b>29.1</b>	<b>2.1</b>
<b>Field</b>	<b>29.1</b>	<b>3.3</b>
<b>Grains</b>	<b>29.1</b>	<b>7.6</b>
<b>Grapes</b>	<b>23.4</b>	<b>16.4</b>
<b>Orchards</b>	<b>36.4</b>	<b>3.8</b>
<b>Rice</b>	<b>31.9</b>	<b>-4.1</b>
<b>Tomato</b>	<b>40.1</b>	<b>26.9</b>
<b>Truck</b>	<b>25.4</b>	<b>45.5</b>

# Climate Change Model Innovations

## Water Availability (feedback from CALVIN)

% Change in Available Water	Agriculture	Urban
Total	-25.7	-0.5

### ■ Climate Induced Yield Change

Crop Groups	Sacramento	San Joaquin
Alfalfa	4.9	7.5
Citrus	1.77	-18.4
Corn	-2.7	-2.5
Cotton	0.0	-5.5
Field	-1.9	-3.7
Grain	-4.8	-1.4
Orchards	-9.0	-9.0
Pasture	5.0	5.0
Grape	-6.0	-6.0
Rice	0.8	-2.8
Tomato	2.4	1.1
Truck Crops	-11.0	-11.0

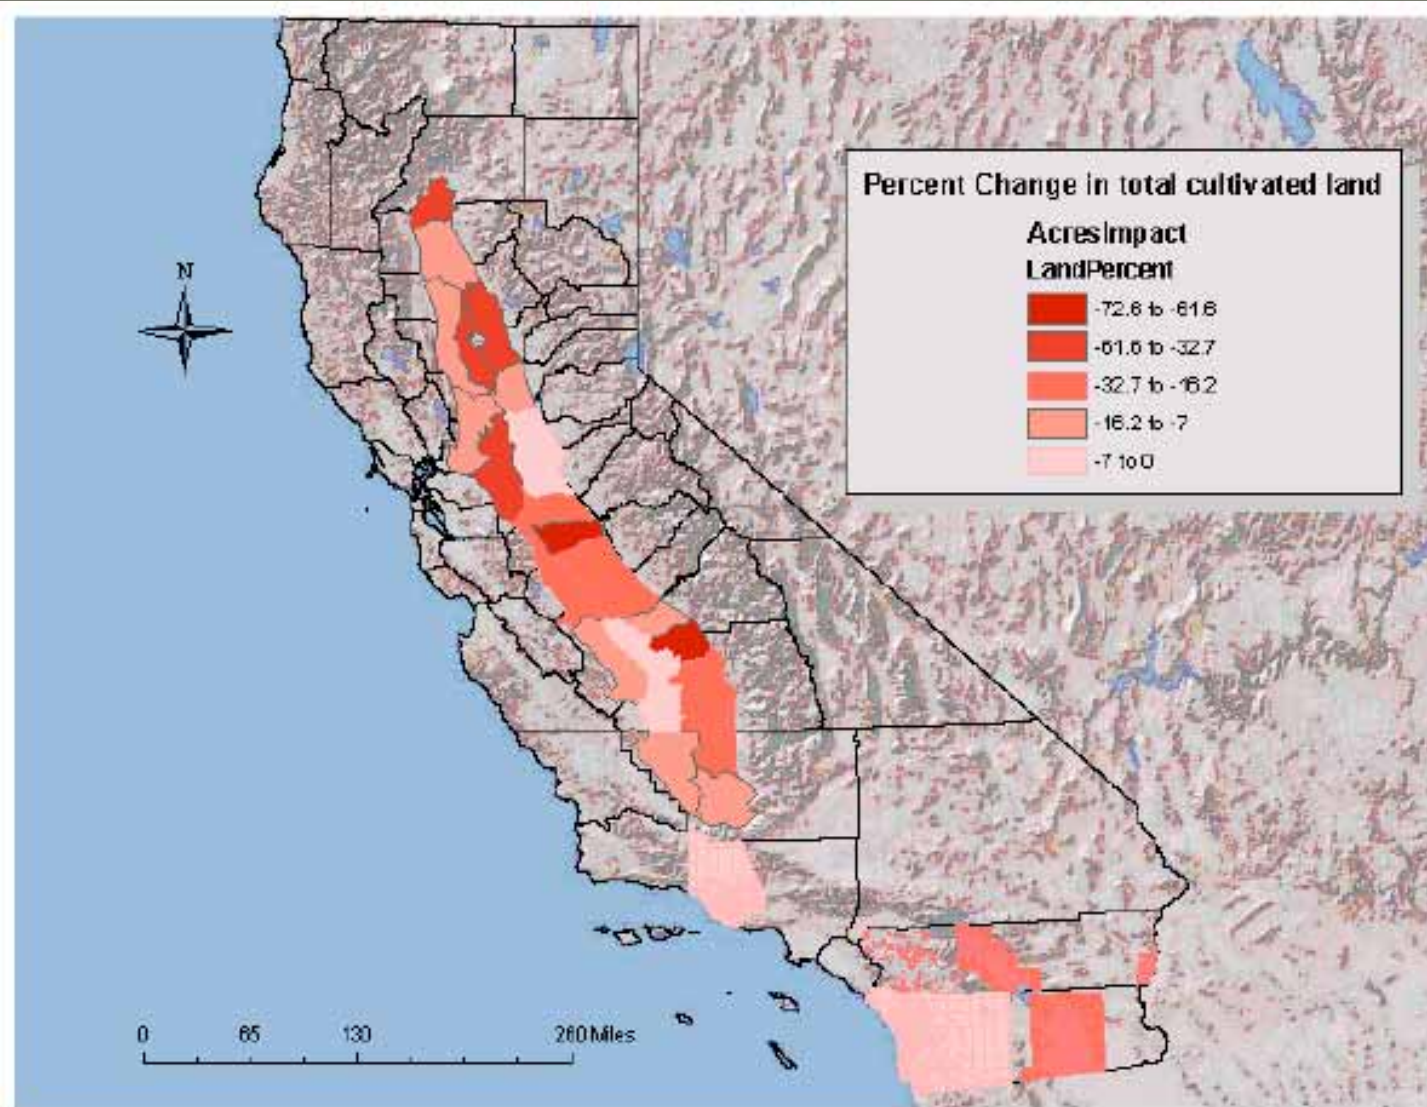

# Extensive Margin Results: Land Use Changes

- Shift to less water intensive crops
- Production shifts to regions with comparative advantages

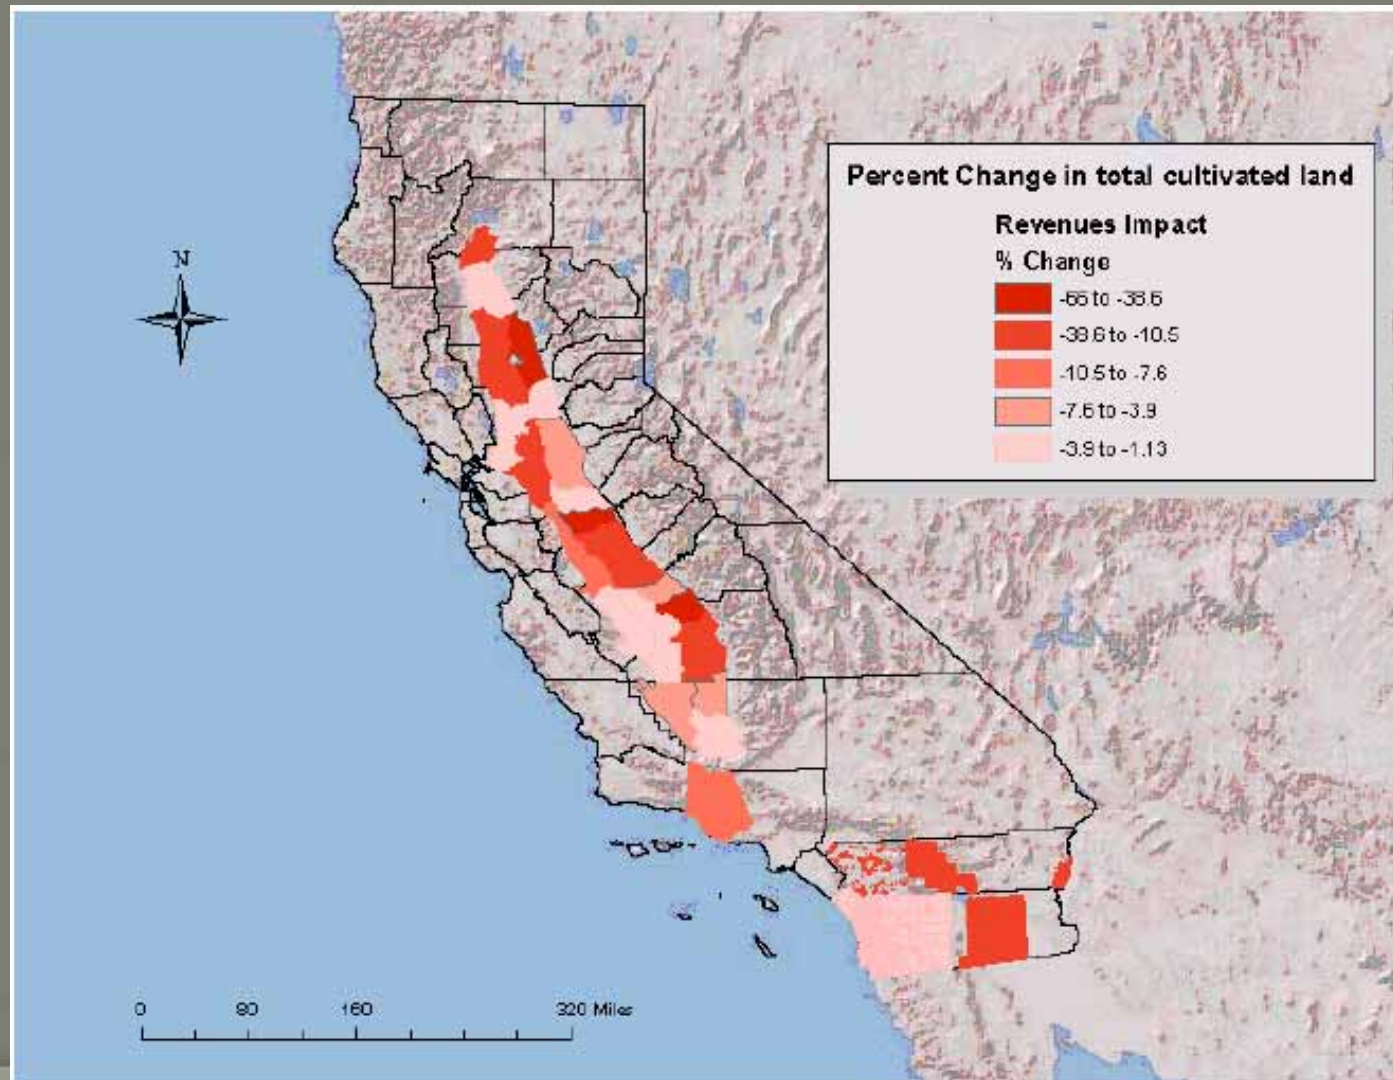

# Land Use Changes with Climate Change

# Extensive Margin Results: Regional Revenue Reduction

# Change in Revenues with Climate Change

# Extensive Margin Results: Crop Prices, Production, Revenues

# Extensive Margin Results: Regional Water Use

- Reduced water use across regions
  - Warm-dry climate water use from CALVIN allows for water transfers

# Intensive Margin Results: Water Use per Acre in CVPM 19

- Region 19 is in Kern County
- Farmers adjust water use per acre in response to reductions in available water and changing yields

# Land, Water and Revenues 2050 versus 2005

**Historical vs. Warm Dry Climate in 2050**

# Conclusions

---

- Both agronomic studies showed yield reduction in perennial and annual crops, with the exception of fodder crops.
- Both integrative studies found that water shortages will be the key resource through which climate change impacts will be felt in California
- Adaptation to climate change will depend on innovative research and resource management methods.
- Statewide acreage reductions average 20.5%
- 2050 agricultural revenues will increase over 2005 levels by 12.5% despite reductions in land and water use.
